# We believe everyone is entitled to live a life without being constantly monitored.

OVPN officially launched in response to escalating internet surveillance, driven by the belief that everyone has the right to live without constant monitoring. While VPN services can address this need, many providers lack robust security procedures to keep users safe and prioritize profitability over protection. OVPN aims to be the most reliable and trustworthy VPN provider, maintaining operations in Sweden, ensuring transparency, guaranteeing service uptime and implementing proven security practices. OVPN servers operate without hard drives to prevent logging or data storage, delivering exceptional speed and customer service. Its servers are strategically placed in cities to maximize uptime and OVPN utilizes AES-256-GCM encryption to ensure top-tier security.

Product Features

Feature	Capability	Details
